DETAILED ACTION

Response to Amendment

1. The reply filed 05/07/2007 was applied to the following effect: All relevant objections and rejections are withdrawn as being satisfied.

Reasons for Allowance

2. Claims 1-8, 18-21 and 26-29 are allowed (renumbered as 1-16, respectively).

The following is an examiner's statement of reasons for allowance:

This application is for a SUSPENSION, HEAD GIMBAL ASSEMBLY WITH MULTILAYERED PLATE SUSPENSION HAVING RIBS AND DISK DRIVE APPARATUS WITH HEAD GIMBAL ASSEMBLY.

- **Claims 1, 18 and 26** specify a suspension, which requires:

"at least three continuous layers laminated together and overlapping one another over an entire length portion of said multilayered plate member, a modulus of elasticity of neighbor layers of said at least three continuous layers being different from each other, both side edges of only a part of the layers of said multilayered plate member within a stiffness required region being bent to form ribs, said multilayered plate member being pivotally securable to an assembly carriage."

The prior art of record fails to fairly teach, show or suggest, by either anticipating or rendering obvious, the invention as set forth in the claims of the instant application. Furthermore, a search made does not detect the combined claimed elements as set forth in the pending claims. Additionally, the reasons for allowance of the claims over the prior art of record is believed to be readily clear, self evident and apparent from the claim language set forth in each of claims 1, 18 and 26, when compared and contrasted with the prior art.

More particularly, the instant invention (as set forth in claims 1, 18 and 26) provides for a suspension, which requires: *“at least three continuous layers laminated together and overlapping one another over an entire length portion of said multilayered plate member, a modulus of elasticity of neighbor layers of said at least three continuous layers being different from each other, both side edges of only a part of the layers of said multilayered plate member within a stiffness required region being bent to form ribs, said multilayered plate member being pivotally securable to an assembly carriage.”* None of the cited prior art of record disclose such a suspension, as set forth in the manner, function and relationship relative to other claimed structures as prescribed by the independent claims. Further, as recited the Applicant's remarks, dated 5/7/2007, page 12, Japanese Publication JP 60-116668 and Traskos et al. (US 6,574,075 B2) do not disclose, teach, show or suggest a suspension as claimed in the present invention.

Therefore, these features, in combination with other features of claims 1, 18 and 26, are not anticipated by, nor made obvious over, the closest prior arts of record of JP '668 and/or Traskos et al. '075. Hence, claims 1-8, 18-21 and 26-29 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
